(CFSP)

(2022/C 100/03)

Note 1 Terms in 'quotations' are defined terms. Refer to 'Definitions of Terms used in this List' annexed to this List.

ML7	‘Riot control agents’	Substances which, under the expected conditions of use for riot control purposes, produce rapidly in humans sensory irritation or disabling physical effects which disappear within a short time following termination of exposure. (Tear gases are a subset of ‘riot control agents’.)
ML17	‘Robot’	<p>A manipulation mechanism, which may be of the continuous path or of the point-to-point variety, may use sensors, and has all the following characteristics:</p> <ol style="list-style-type: none"> <li>a. Is multifunctional;</li> <li>b. Is capable of positioning or orienting material, parts, tools or special devices through variable movements in three-dimensional space;</li> <li>c. Incorporates three or more closed or open loop servo-devices which may include stepping motors; <u>and</u></li> <li>d. Has ‘user-accessible programmability’ by means of the teach/playback method or by means of an electronic computer which may be a programmable logic controller, i.e. without mechanical intervention.</li> </ol> <p>‘User-accessible programmability’ refers to the facility allowing a user to insert, modify or replace ‘programs’ by means other than:</p> <ol style="list-style-type: none"> <li>a. A physical change in wiring or interconnections; <u>or</u></li> <li>b. The setting of function controls including entry of parameters.</li> </ol> <p><u>Note</u> <i>The above definition does not include the following devices:</i></p> <ol style="list-style-type: none"> <li>1. Manipulation mechanisms which are only manually/teleoperator controllable;</li> <li>2. Fixed sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is mechanically limited by fixed stops, such as pins or cams. The sequence of motions and the selection of paths or angles are not variable or changeable by mechanical, electronic or electrical means;</li> <li>3. Mechanically controlled variable sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is mechanically limited by fixed, but adjustable, stops, such as pins or cams. The sequence of motions and the selection of paths or angles are variable within the fixed programme pattern. Variations or modifications of the programme pattern (e.g. changes of pins or exchanges of cams) in one or more motion axes are accomplished only through mechanical operations;</li> <li>4. Non-servo-controlled variable sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is variable but the sequence proceeds only by the binary signal from mechanically fixed electrical binary devices or adjustable stops;</li> <li>5. Stacker cranes defined as Cartesian coordinate manipulator systems manufactured as an integral part of a vertical array of storage bins and designed to access the contents of those bins for storage or retrieval.</li> </ol>
ML11	‘Satellite navigation system’	A system consisting of ground stations, a constellation of satellites, and receivers, that enables receiver locations to be calculated on the basis of signals received from the satellites. It includes Global Navigation Satellite Systems and Regional Navigation Satellite Systems.
ML4, 11, 21	‘Software’	A collection of one or more ‘programs’ or ‘microprograms’ fixed in any tangible medium of expression.

Technical Note 1'Program'

A sequence of instructions to carry out a process in, or convertible into, a form executable by an electronic computer.

Technical Note 2'Microprogram'

A sequence of elementary instructions maintained in a special storage, the execution of which is initiated by the introduction of its reference instruction into an instruction register.

ML11	'Spacecraft'	Active and passive satellites and space probes.
ML19	'Space-qualified'	Designed, manufactured, or qualified through successful testing, for operation at altitudes greater than 100 km above the surface of the Earth. <u>Note</u> A determination that a specific item is 'space-qualified' by virtue of testing does not mean that other items in the same production run or model series are 'space-qualified' if not individually tested.
ML20	'Superconductive'	Refers to materials, (i.e. metals, alloys or compounds) which can lose all electrical resistance (i.e. which can attain infinite electrical conductivity and carry very large electrical currents without Joule heating). 'Critical temperature' (sometimes referred to as the transition temperature) of a specific 'superconductive' material is the temperature at which the material loses all resistance to the flow of direct electrical current.

Technical Note

The 'superconductive' state of a material is individually characterised by a 'critical temperature', a critical magnetic field, which is a function of temperature, and a critical current density which is, however, a function of both magnetic field and temperature.

ML22	'Technology'	Specific information necessary for the 'development', 'production' or 'use' of a product. The information takes the form of 'technical data' or 'technical assistance'. Specified 'technology' for the EU Common Military List is defined in ML22.
------	--------------	--

Technical Notes

1. 'Technical data' may take forms such as blueprints, plans, diagrams, models, formulae, tables, engineering designs and specifications, manuals and instructions written or recorded on other media or devices such as disk, tape, read-only memories.
2. 'Technical assistance' may take forms such as instruction, skills, training, working knowledge, consulting services. 'Technical assistance' may involve transfer of 'technical data'.

ML10	'Unmanned aerial vehicle' ('UAV')	Any 'aircraft' capable of initiating flight and sustaining controlled flight and navigation without any human presence on board.
ML21	'Vulnerability disclosure'	The process of identifying, reporting or communicating a vulnerability to, or analysing a vulnerability with, individuals or organisations responsible for conducting or coordinating remediation for the purpose of resolving the vulnerability.
